Raji Farouq Adewunmi

Junior Full-Stack Developer & AI Engineer

Lagos, Nigeria | rfarouq69@gmail.com | +234 807 949 7100 | designedbymiles.vercel.app | github.com/GraphicMiles

PROFESSIONAL PROFILE

Junior Full-Stack Developer and AI Engineer building practical web and mobile applications in React and Node.js, backed by Firebase and Supabase, with grounded AI features inside real product workflows. Hands-on project work across retrieval-augmented generation (RAG), tool calling, evaluation suites and on-device language models, paired with end-to-end UI/UX design so shipped interfaces are clear, responsive and complete.

TECHNICAL SKILLS

Frontend & UI/UX	React, Next.js, TypeScript, JavaScript, Vite, Tailwind CSS, HTML, CSS, responsive systems, Photoshop, Illustrator
Backend & Data	Node.js, Express, Python (FastAPI), Supabase, Firebase (Auth, Firestore, Realtime DB), SQL, SQLite, REST APIs
Applied AI & Agents	LLM integration, RAG & source grounding, tool calling, evaluation suites, MCP, Groq, Gemini, llama.cpp
Mobile & Systems	Flutter (Dart), Android (Java, JNI/NDK), Capacitor, Rust, installable offline-first PWAs
Testing & Cloud	Playwright, Vitest, Docker, Vercel, Render, Cloudflare Workers & web-protection fundamentals

SELECTED PROJECTS

Legally Unbullied · AI Nigerian legal information platform · legally-unbullied.onrender.com — 2026

- Built a classification, Firestore retrieval and drafting pipeline across 20 practice areas of Nigerian statute (1999 Constitution, federal acts, Lagos State laws and CBN regulations) so answers come from verified provisions rather than open-ended generation.
- Verified every cited section against retrieved source text, added a critic stage that refuses unsupported answers, and gated quality with a 100-scenario evaluation suite.

Node.js, Express, Firebase, Groq, Gemini · github.com/GraphicMiles/Legallyunbullied

Scout · Lightweight browser automation runtime in Rust · github.com/GraphicMiles/Scout — 2026

- Wrote a single Rust binary that fetches pages, parses DOM, runs page JavaScript in a sandbox, fills forms and extracts structured fields with no Chromium install, idling near 5 MB of RAM.
- Exposed the same toolset over an authenticated HTTP API and a Model Context Protocol (MCP) stdio server, published on npm as `@graphicmiles/scout`.

Rust, HTTP API, MCP over stdio, npm (@graphicmiles/scout)

Nearspace · Proximity network for Nigerian tech creators · nearspace.com.ng — 2026

- Built a location-aware creator discovery and collaboration platform with geohash search, a live map, encrypted one-to-one and group chat, realtime presence and Paystack Pro subscriptions.
- Shipped as an installable, cache-first PWA backed by Firebase rules and serverless functions, covered by 590+ unit, API and security-rules tests.

React, Vite, Firebase, MapLibre, Paystack, Vercel

Luna · On-device AI coding & utility agent for Android · github.com/GraphicMiles/forgeai-android — 2026

- Ran quantised GGUF language models directly on Android phones via llama.cpp over JNI with SHA-256 model verification, token streaming and zero network dependency.
- Built a bounded 9-tool file workspace with approval gates, secret-file locks, one-tap undo, a 42-test agent core and an optional cloud GPU tier measured at 49 tok/s.

Flutter (Dart), Java, C++ JNI, llama.cpp

Also built: Atelier Drop (18-page static storefront engineered to 0 to 19 px of a live build, 27/27 Playwright click-path tests), **Chan Watchparty** (synchronised LiveKit/YouTube watch party on React, Node.js, Cloudflare Workers & Android), and **Stare** (browser game refereed by MediaPipe face tracking).

EXPERIENCE

Independent Full-Stack Developer — 2020 to Present

- Design and build responsive React and Node.js applications connected to Supabase and Firebase for authentication, realtime data and storage.
- Implement LLM retrieval, tool-calling flows, automated Playwright/Vitest checks and Cloudflare web-security fundamentals.

Freelance Brand & Visual Designer — 2022 to Present

- Design channel branding, thumbnails and campaign visuals for digital creators from brief through final production assets.

EDUCATION & FOCUS

Tai Solarin University of Education — 2023 to 2027

B.Sc. Computer Science · 400-Level Undergraduate (Ogun State, Nigeria)

Career Focus

Seeking junior or entry-level roles in Full-Stack Web Development and Applied AI Engineering. Available for remote, hybrid and on-site teams in Lagos or internationally.
